Radeon™ RX Vega M Graphics Driver version 21.10.03.11, which is based on 21.10RC1, does not include the latest functional and security updates. An update is targeted to be released in March of 2022 and will include additional functional and security updates. Customers should update to the latest version as it becomes available.

This driver release carries following support:

- Key Program supported
 - AMD Big Software 7.0
- Big Software 7.0 and other general fixes and improvements to improve user experience with our Radeon Software.
- Additional 21.10 feature improvements/additions delivered in this release
 - Microsoft PlayReady AV1 decode Support
 - RSX branding updates
- Driver optimizations to support following game launches;
 - Metro Exodus – Enhanced Edition (DX12 – RT only)
 - Resident Evil Village (DX12)

Known Issues

- PlayReady is not working with Edge browser. Playback shows AVC instead of HEVC
- TDR /System restart on closing Blender after "bmw27" sample render; probability 4/6 times
- Vudu playback error "Unable to start playback" is observed
- Corruption on rendering Blender bmw27 sample
